WHAT IS THE CHANGE ?	WHAT IS THE IMPACT ?	WHO IS AFFECTED ?
Correct Display of Roles: The Quality Controller's name was incorrectly shown under the Inspector section. This has been corrected.	The report for packhouse inspector shows the correct person details under QC details	Packhouse inspector
The "wrong" value was hardcoded in the QCP 5 report. It now shows the correct data.	Remove duplicate consignments to avoid confusion.	Border Inspector
The number of sampled boxes was previously showing as zero for all boxes in packhouse inspections. This now displays the correct numbers.	Correct number of sampled boxes id displayed in qcp 4	Packhouse inspector
The number of sampled boxes was previously showing as zero for all boxes in border inspections. This now displays the correct numbers.	Correct number of sampled boxes id displayed in qcp 5	Border Inspector
Passed/Failed Weights: The passed and failed kilogram values were missing from QCP 4 reports. These are now correctly shown.	The Inspection Reportson QCP4 show all the passed and failed weights	Packhouse inspector
Passed/Failed Weights: The passed and failed kilogram values were missing from QCP 5 reports. These are now correctly shown.	The Inspection Reportson QCP5 show all the passed and failed weights	Border Inspector
Inspection Results: Some inspection reports were displaying zero results. This issue has been fixed, and the reports now show actual inspection data.	The Inspection Reports show all the results.	Packhouse inspector
QCP 4 reports were missing signatures for the Manager, Quality Controller, and Inspector. These signatures are now included once the inspection is approved.	Signatures of the Export Company Manager, Quality Controller and Packhouse Inspector can be seen after complete inspection on the report.	Packhouse inspector
To prevent confusion, signatures will no longer appear on reports that haven't been approved yet in QCP4	Signatures of Packhouse Inspector appears on the report after completing the inspection	Packhouse inspector
To prevent confusion, signatures will no longer appear on reports that haven't been approved yet in QCP5	Signatures of Border Inspector appears on the report after completing the inspection	Border Inspector
We have updated the validation of sampled boxes in QCP 4 inspections to follow the ISPM 31 guidelines. Specifically: The number of boxes to be sampled is now calculated based on a 95% confidence level, as recommended in the international standard. This ensures more accurate and reliable inspection results, improving compliance with global best practices	Number of boxes to be sampled in the packing list is predefined in QCP4	Packhouse inspector
We have updated the validation of sampled boxes in QCP 5 inspections to follow the ISPM 31 guidelines. Specifically: The number of boxes to be sampled is now calculated based on a 95% confidence level, as recommended in the international standard. This ensures more accurate and reliable inspection results, improving compliance with global best practices.	Number of boxes to be sampled in the packing list is predefined in QCP5	Border Inspector
The Verify Document feature has been improved to: Display the PDF file directly within the system for easy viewing. Be accessible to DCIC Admin accounts, with view-only permissions.	Verify Document in the system is possible for DCIC Admin	DCIC admin
The Verify Document feature has been improved to: Display the PDF file directly within the system for easy viewing. Be accessible to Senior Zonal Inspector user accounts, with view-only permissions.	Verify Document in the system is possible for both Senior Zonal Inspector	Senior zonal inspector
QCP 4 have been updated to: Remove duplicate consignments to avoid confusion.	Remove the duplicated consignments in the tables	Packhouse inspector

	WHAT IS THE CHANGE ?	WHAT IS THE IMPACT ?	WHO IS AFFECTED ?
FIXED FEATURE	QCP 5 have been updated to: Remove duplicate consignments to avoid confusion.	Remove the duplicated consignments in the tables	Border Inspector
	Previously, the Exit Departure Time in QCP 5 reports was hardcoded as 12:00, regardless of the actual schedule. This has been corrected. Now, the Exit Departure Time will: Dynamically display the time entered during the Prepare Schedule process. Ensure accurate tracking and reporting of consignment movements.	The time on the border inspection report for the consignment changes based on the pre-schedueled time by the Quality Controler	Border Inspector
	An issue was identified where products were being duplicated during the QCP 5 inspection process. This has now been fixed to ensure: Each product appears only once in the inspection record.	QCP5 table lists the exact number of products no duplicates	Border Inspector
	An issue was found where not all products listed under "Other Products" were showing up during the QCP 5 inspection. This has been resolved to ensure: All products entered under "Other Products" are now fully visible during the inspection.	All products "Other Products" are now fully visible	Border Inspector
	The Redocument process under the Exporter section in QCP 5 has been improved to ensure: The Packing List and Destination can now be properly reviewed and updated. The status is automatically updated upon redocumentation. Notifications are sent to both the Quality Controller and the Export Company Admin to prompt the required actions.	Redocument under QCP 5 inspections modified	Border Inspector
	The Traceability Code search during verification has been enhanced to: Search across all available records, not just those displayed on the current page. Eliminate limitations caused by pagination, ensuring complete and accurate results are returned for any query.	Search for Traceability Codes	DCIC admin
	All instances of "RedFlag" have been changed to "Deactivate Farm". This change ensures clearer communication of the action's purpose within the system.	Farms are deactivated by DCIC admin	DCIC admin
	The Prepack Schedule has been updated to include: A section for Clearing Agents	Added Clearing Agents	Quality controller
	All instances of "Zonal Inspector" across the system have been updated to "Senior Zonal Inspector" to reflect the correct role designation. This includes updates to: User roles and permissions Labels in forms, tables, and dashboards Notifications and reports System configuration and user interface texts	Updated from Zonal Inspector to Senior Zonal Inspector	DCIC admin
	The Download Report button is now fully functional, allowing users to download inspection reports without errors. The Filter feature has been fixed to properly display results based on selected criteria.	Filter by Status or by Date and Download Report button	Border Inspector
	All instances of the term "Variant" across the system have been updated to "Scientific Name"	From Variant to Scientific Name	DCIC admin

	WHAT IS THE CHANGE ?	WHAT IS THE IMPACT ?	WHO IS AFFECTED ?
	A new validation has been implemented to improve data accuracy during the receiving process: Received kilograms (kgs) can no longer exceed the available harvest balance. The system now performs real-time validation as values are entered. Users are immediately alerted if the input exceeds the allowable limit, preventing over-entry errors.	On the Reception Form: Quality controller cannot receieve produce more than the farmers harvet balance	Quality controller
	Cleared and completed consignments are now arranged and displayed in order of their clearance time. This update: Orders consignments by the time of clearance, and date from latest to the previously entered. Makes it easier to track and review consignments based on when they were arrived those that are pending and the those completed.	Clear display of consignments in QCP 5	Border Inspector
NEW FEATURE	The DCIC Admin Configuration section has been enhanced to allow capturing of Clearing Agents with the following details: Name Identification Number (NIN) Exit Handler Company	DCIC Configurations include Clearing Agents	DCIC admin
	A new column has been added to display the QCP 4 Inspector who worked on each consignment. This enhancement allows users to: Easily identify the inspector responsible for the QCP 4 inspection Improve traceability and accountability in the inspection process	Added a column on the QCP 5 report showing the QCP 4 Inspector who worked on the consigment	Border Inspector
	The Senior Zonal Inspector account has been updated with the following components, with view-only access (no editing unless specified): User Broadcast – View access added. Packhouse Inspector Table – View access added, with the ability to Configure only (no edits or deletions). Traceability Codes – View access added.	Improved functionality for the Senior Zonal Inspector User Account	Senior zonal inspector
	A Search button has been added to the Exit Inspection screen to allow users to: Quickly search for consignments by their Consignment Number Improve navigation and efficiency during inspections	Serach button	Border Inspector
